

Head On Collision Results In Serious Calcaneal Fracture| Douglasville Accident Attorney

Some of the more serious car accidents we have seen in recent years result in injuries from direct head on collisions. When the force of the collision is powerful, serious injuries can result to the lower extremities. Recently we had a client who was not ambulatory for several weeks as he had suffered a comminuted calcaneal fracture of the foot. Treatment for this type of injury often requires surgery and extensive physical therapy. Proper documentation of medical bills and possible future medical expenses are critical in evaluating a plaintiff's personal injury claim.

Individuals who do not have proper legal representation should be leery of trying to settle their own person injury claim for a serious injury such as this. There is absolutely no obligation to order our free book "Mistakes To Avoid If You Want To Win Your Car Wreck Case" please feel free to call us at (800) 503-7598.
